Research Interests

My research aims to develop program reasoning systems for safe and reliable software. In particular, I am working on the following topics:

- AI-based program analysis system for detecting deep semantic software bugs
- General-purpose program debloating system for secure and efficient software
- Scalable program synthesis system for automatic software generation and repair

Education

Seoul National University Mar 2009 – Aug 2017
Ph.D. in Computer Science and Engineering
Dissertation: Selectively Sensitive Static Analysis by Impact Pre-analysis and Machine learning
Advisor: Kwangkeun Yi

Seoul National University Mar 2005 – Feb 2009
B.S. in Computer Science and Engineering

Experience

University of Pennsylvania Jul 2017 – present
Post-doctoral Researcher
Advisor: Mayur Naik

Facebook Apr 2017 – Jun 2017
Research Scientist (contingent)

Research Projects

- **ASPIRE: Transformations for Reducing Software Complexity** 2017 – present

Software

I have contributed to the following open-source software:

- Chisel: an automated program debloating system
`https://github.com/aspire-project/chisel`
- Sparrow: a static analyzer for C programs
`https://github.com/ropas/sparrow`
- Petablox: declarative program analysis framework for Big Code
`https://github.com/petablox-project/petablox`

- Infer: a static analyzer for Java, C, C++, and Objective-C
  `https://github.com/facebook/infer`
- Euphony: a probabilistic model-guided program synthesizer
  `https://github.com/wslee/euphony`
